SAIN BUX

Agentic AI Engineer|ForwardDeployed Engineer

+92-311-3631569 | sainbuxseelro11@gmail.com | linkedin.com/in/sain-bux | github.com/sain-bux

PROFESSIONAL SUMMARY

Agentic AI Engineer with hands-on experience building AI agents and automation workflows using Python and the OpenAI SDK. Skilled in Prompt Engineering and Loop Engineering for reliable agent behavior, with Model Context Protocol (MCP) for tool and context integration. Delivered 50+ AI and automation projects, including 12 focused on Loop Engineering. Works daily with agentic CLI tools such as Claude Code and OpenCode for AI-assisted development.

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript, TypeScript
- **Web Development:** HTML, CSS, Next.js, FastAPI
- **Agentic AI & LLM Engineering:** OpenAI SDK, Prompt Engineering, Multi-Agent Systems, Loop Engineering, LLM, RAG (Retrieval-Augmented Generation), Tool Calling
- **Protocols & Integration:** Model Context Protocol (MCP), API Integration, Database Integration
- **DevOps & Tools:** Git, GitHub, Docker
- **Automation Tools:** n8n
- **Agentic CLI Tools:** Claude Code, OpenCode, Gemini CLI, Codex, Antigravity, AI Studio, Kiro, Qwen

EXPERIENCE

AI Engineer — Morphelabs (Remote)

Feb 2026 – Present

- Working as an AI Engineer building agentic AI systems, automation workflows, and LLM-powered applications using Python and the OpenAI SDK.
- Contributing to multi-agent workflows, API and database integrations, and tool-calling pipelines in a remote, fast-paced engineering environment.

PROJECTS (50+ TOTAL)

Loop Engineering Projects (12 Total)

- Built 12 dedicated projects applying Loop Engineering principles to design reliable, self-correcting agent execution loops for autonomous task completion.

AI Chatbot using Chainlit

- Built with Python, Chainlit, OpenAI SDK, and Gemini ADK; applied prompt engineering for a modular, scalable, and interactive conversational experience.

Autonomous AI Agent

- Developed an AI Agent in Python using the OpenAI SDK that autonomously analyzes user input, plans responses, and executes actions based on context.
- Integrated reasoning, task management, and modular prompt design; applied loop engineering principles for reliable, scalable decision-making.

Multi-Agent Automation System

- Designed a multi-agent workflow connecting specialized agents via MCP for tool/context sharing, with n8n handling external automation triggers.

Python & Streamlit Applications (9 Total)

- Built and deployed 9 Python-based web applications using Streamlit, covering the full development cycle: design, backend logic, cloud deployment, and UI optimization.

Additional Projects (25+)

- Additional AI, automation, and web-based projects built using Python, JavaScript/TypeScript, and Next.js, including API and database integrations.

EDUCATION & TRAINING

- **Bachelor's in Software Engineering** — University of Sindh (2022 – 2026)
- **Intermediate (A1 Grade)** — BISE Larkana, Shahdadkot (2022)
- **Agentic AI Course** — SMIT (Saylani Mass IT Training), Feb 2025 – Dec 2025
- **Governor Initiative for Artificial Intelligence (GIAIC)** — Feb 2024 – Present
- **Presidential Initiative for Artificial Intelligence (PIAIC)** — Nov 2024 – Present
